Wells Fargo / local explorations

Apple SF Pro typography approved. Native status-bar instances remain connected to iOS 18 and iPadOS 18. No Wells Fargo library is available in this connection. App components and screenshot-derived colors are clearly labeled local explorations.

Source fidelity

All originals are preserved above. Frames use original 1290 × 2796 px (430 × 932 pt at 3×). Only Directions 1 and 2 are created. Future directions must use the originals and preserve these frames.

Unavailable source content: the Accounts screen crops the lower Credit section; only Credit and $5,837.82 can be recovered. Checking truncates the Zelle and ACH descriptions and crops the next carousel offer to a % graphic. Ellipses are retained; no missing words, values, disclosures, or destinations have been invented.

Only visible UI can be reconstructed from screenshots. Navigation affordances are retained; backend behavior and undisclosed destination screens cannot be recovered. Accounts ↔ Checking is connected in each direction.

Card rules / density

Comfortable: 20 pt card padding, 16 pt card gaps. Compact: 12 pt card padding, 8 pt card gaps. Both: 10 pt corners, 1 pt border, no shadow, 44 pt minimum targets. Identical 17 pt body, 14 pt supporting type, 22 pt headings; values use 36–48 pt.

Color / local source-derived tokens

background #F6F5F3

surface #FFFFFF

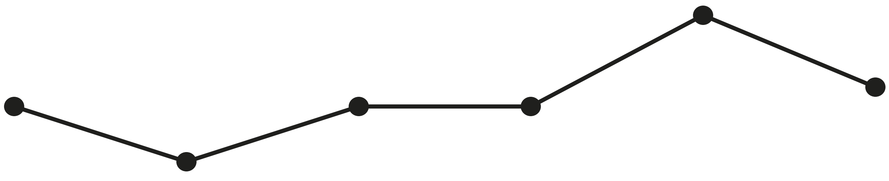
APR	MAY	JUN	JUL	AUG	SEP
835	826	835	835	850	838



Disclosures

How is my score calculated?

Revision 2 / Layout architecture

A stronger card direction, preserving all original information. The original six explorations remain above. Cards group a complete task rather than each individual value.

Accounts: one cash portfolio with an aggregate balance and aligned account rows. Secondary products share a two-column card grid. Advisors move below account information.

Checking: a left-aligned balance hero, attached navigation, merchant-led transaction rows, and a quieter offer strip.

Credit insight: larger score, horizontal 300–850 range indicator, metadata close to the number, full-width history and a distinct explanation action. The score position is calculated from 838 within 300–850.

Both densities share grouping, typography, iconography and action hierarchy. Comfortable uses 20 pt padding and 16 pt card gaps; Compact uses 12 pt padding and 8 pt gaps. No new labels, financial values or destinations.

Source limits remain: lower Credit information and adjacent offer are cropped; Zelle and ACH descriptions are truncated. They remain excerpts. No Wells Fargo library is available; Apple typography is approved and brand-specific modules are local explorations.

1 / Comfortable cards · R3 / Bold brand composition

Full-width red heroes · oversize financial typography · paired account cards · clear, high-contrast actions.

ACCOUNTS CHECKING CREDIT INSIGHT

2 / Compact cards · R3 / Bold brand composition

Same bold composition and type · tighter padding, gaps and card heights · efficient density.

ACCOUNTS CHECKING CREDIT INSIGHT

R3 / Original screenshots, R1 and R2 remain untouched. Bold local exploration of existing Wells Fargo colors and Apple typography. Source-cropped information is still explicitly incomplete.

How is my score calculated?

R3 / Bold brand composition

Full-width Wells Fargo red heroes; much larger financial typography; crisp 6 pt card corners; white status and navigation on red. Apple SF Pro remains the approved typeface. Solid colors only, with no gradients, glass, or shadows.

Accounts uses a two-card account spread beneath the aggregate balance. Checking treats transactions as a ledger led by amounts. Credit insight places the large score, rating, model, provider and range within the brand field. History and source disclosures stay visible below.

Comfortable and Compact share the same composition and type sizes. Density changes padding, gaps and account-card height. All source content, labels, dates, amounts and affordances are retained. Existing R1 and R2 sets remain intact.

Local exploration components are used for this treatment. No Wells Fargo library is connected. Source cropping still prevents reconstruction of the lower Credit section, truncated transaction endings, and adjacent offer copy. No additional financial information or destinations are invented.
